Important instructions

- Before using the lock, please read the instructions for use carefully.
- The instructions for use only relate to the lock itself and not to how to operate the safe.
- Ensure that you only program the lock while the safe door is open.
- After changing the code, always try the code several times with the safe door open.
- Only after several positive function tests (opening / closing) the safe door may be closed.
- Each key entry is confirmed by an audible tone.
- You have a maximum of 10 seconds for each key entry. If you do not make an entry via the keypad during this period of 10 seconds, the entry procedure will automatically abort. You must then start again from the beginning.
- After entering a valid code, a double signal sounds. An invalid entry will trigger a long tone.
- After entering an invalid code the first attempt, wait 20 seconds before entering the code again.
- If the code is entered incorrectly on four consecutive occasions, the keypad and the lock will be disabled for 5 minutes. During this period, the LED will flash every 10 seconds and you will hear a long tone when attempting to make an entry. Entering an incorrect code on two further occasions after the keypad has been re-enabled will trigger a new keypad lock-out period of 5 minutes. After entering a valid code you have four new occasions to enter the code and open the lock.
- The lock works with a six digit code. Preceded by a two digit ID number.
- At the time of delivery, the lock is set to the standard Manager Code of 123456. Change this code immediately to your own choice of Manager Code. Do not use personal or other simple data which can easily be found out for your Manager Code
- If needed, the owner of the Manager Code can add up to 48 codes / users. This code must be immediately changed by the user in a code of their own choice. Do not use personal or other simple data for your user code.
- Users 50 59 always have an override code. This means that they can always open immediately after entering the first code, even if time delay has been activated.
- Please keep the code always carefully and protect it against improper use by unauthorized persons.
- When typing in your code cover the keypad so no one near you can see your code.
- · Depending on the used lock / keypad and the way the lock is installed, there are several ways to

open and to close a safe. By example with a lever or by turning the keypad. Please contact your safe

supplier for more information about your specific situation.

Caution! Don't forget your code, otherwise the lock can not be used anymore!

- The lock has been designed for use in a temperature range from +10°C to +50°C and a noncondensing humidity range from 30% to 80%.
- It may only be cleaned with a moist cloth (do not use aggressive cleaning agents).
- The lock may only be installed by qualified fitters.
- The lock may not be lubricated.
- Never open the lock housing. If it is necessary to disassemble the hardware, only do so in accordance with the technical instructions. If you fail to do so, the lock may no longer function properly and you will forfeit your right to warranty.

Information about MiniTech

Using your keypad

Press any button to power up the keypad.

Automatic power savings: if no operation is performed for 30 seconds the keypad will automatically switch off.

To scroll menu functions press

To exit from a menu and get back to start menu scroll the functions until the message "EXIT?" and press \checkmark .

Shortcuts

Press and hold the button corresponding to the needed function.

- \blacksquare = Change Manager code (01), users (02-49) and override users (50-59)
- 1 = Users management
- **2** = Lock setup
- 3 = Dynamic codes
- **4** = Block/unblock the lock
- **5** = Test mode
- **6** = Change keypad language
- **1** = Audit
- **8** = Firmware release
- **9** = Time delay
- 🗩 = Back to start menu
- 🖌 = Master menu

Users properties and default codes

Master: code (default: 1-2-3-4-5-6-7-8).

Manager: code (default: ID: 0-1 code: 1-2-3-4-5-6) or code + Dallas key.

Users 02 - 49: code (default: ID: 0-2 code: 0-2-0-2-0-2, ID 0-3 code: 0-3-0-3-0-3, etc...), code + Dallas key.

Override user 50 - 59: code (default: ID 50 code: 5-0-5-0), code + Dallas key.

Change default codes before operating the lock

Penalty

Four consecutive wrong codes initiate a four minutes penalty. During this period LCD will display the message "PENALTY" and no operation will be allowed.

Time Delay

Time delay 0-99 minutes; open window 1-19 minutes.

Dallas keys

Available as option for Manager and users (not available for Master).

Power supply

Lock can be powered with an ALKALINE 9V battery, with an internal large battery box (6 ALKALINE 1.5V batteries) or with power supply and dedicated interface.

Low battery warning

A long beep and the message "BATTERY LOW" indicate the battery is low and has to be immediately changed.

Audit

The lock stores the last 5.500 operations with time, date, user and operation. The keypad stores the last 250 operations with time, date, user and operation.

Never remove lock cover, this voids the warranty.

Open the lock

Manager (01) and users (02-49): open the lock with time delay

Power up the keypad. LCD will display the message:	ENTER CODE X X – X X X X X X X
